

**Amendments to the Specification**

Please replace paragraph [0018] as follows:

[0018] The constant velocity joints 19 and 21 accommodate pivoting of the suspension unit 15 relative to the chassis 120, which allows the ~~distance between the~~ (a) motor 18 and (b) the hub 24 and gearbox assembly 29 (spiral bevel gearbox 22 and right angle gearbox 23) to be relatively displaced ~~change~~ according to the movement of the suspension unit 15. ~~As such, the drive train is extendible and retractable between the driver motor 18 and the wheels 114, 116 to accommodate pivoting of the suspension unit 15 relative to the chassis 120.~~
